

SF-Rima - Project Report # 4

Project:

**Glorietta Bay Parking,
Coronado, CA**

SF-Rima™

SF-Rima™ Permeable Pavement System utilized in public parking for popular tourist and community area.

The City of Coronado, concerned about contaminants washing off the parking surface into the bay – especially during first-flush – chose a permeable pavement solution.

SF-Rima™ provided a pavement structure that filters water before exfiltrating to the soil or entering the bay and stormwater system.

The project was machine-laid, providing efficiency and value.
