

## SF-Rima - Project Report # 5

### Project:

**Hayward Design Center,  
Santa Barbara, CA**

SF-Rima™

SF-Rima™ Permeable Pavement System was an entirely appropriate solution for this business known for its “green” focus.

This renovation project involved the complete “recycling” of an aging 30-year-old, 8,400 sq. ft. warehouse in downtown Santa Barbara into a state-of-the-art showroom. Both the exterior and interior were transformed into an environmentally sensitive project.

The existing impermeable asphalt pavement of the parking lot, a source of contaminated runoff, was removed and recycled.

SF-Rima™ and other natural materials allow water to permeate through to the existing soils rather than shed accumulated pollutants into the stormwater system.

The light Palomino color also reflects heat from the pavement, minimizing the heat island effect.
