

SF-Rima - Project Report # 11

Project:

The Olsen Residence Dallas, Georgia

11947 Cartersville Highway

30,000 sq.ft. SF-Rima™

(1,500 ft long driveway through wooded area, parking lot)

This residence is owned by an antique furniture dealer. His house is a showcase for some very unique furnishings. His pool is a four level fountain that overlooks a small lake.

The residence is nestled in the woods. The driveway is over 1,500 ft. long, meandering through the forest.

The grades in front of the garage direct runoff to the garage. Mr. Olsen had a trench drain installed to prevent runoff from entering the garage.

“But before the rain water gets to the trench drain, the runoff has to get past the SF-Rima™ pavement.”

Mr. Olsen said that he witnessed a 3 inch per hour rainfall and the bottom of the trench did not have any water running in it. It was only damp.

He said it was amazing how well the SF-Rima worked.

The owner decided to use SF-Rima™, so that the vegetation would not suffer due to an impervious pavement.

Mr. John Olsen has given the interviewer, an employee of Blue Ridge Pavers, permission to publish these photos.
